Education

University of Maryland, College Park

B.S. in Computer Science, Minor in Statistics; GPA: 3.5

Expected May 2028

College Park, MD

Projects

IEX Order Book & Matching Engine | C++17, STL, POSIX, Linux perf

Jul 2026 – Aug 2026

- Built a C++17 order book and matching engine and replayed **50.9M** real IEX exchange messages through it without ever resyncing to the exchange's book, agreeing with the exchange on 99,122 of 99,123 fills and 100% of top-of-book prices
- Sustained **1.26M events/sec** over the full replay and a 1.2 μ s per-message p99 on a separate 2M-event run, keeping each price level as a FIFO queue (std::list) inside a std::map, with an order-ID hash map for O(1) cancels
- Implemented B+ tree and LSM-tree backends for the event log and benchmarked them on identical 2M-record workloads, where the B+ tree gave **12.8x** the read throughput and 22x faster range queries at the cost of 27% more disk space
- Traced an apparent 1.65x regression to the CPU frequency governor, not a code change, using perf counters and a do-nothing control book, then cut run-to-run variance from about 6% to 0.06% by pinning cores and fixing the clock

Experience

Amazon Web Services

Sep 2026 – Dec 2026

Software Development Engineer Intern

Redmond, WA

- Building capacity planning for Amazon Redshift maintenance like patching: Java logic that sets upper and lower bounds on reserved EC2 capacity to balance availability against cost, validated by backtesting

Capital One

Jun 2026 – Aug 2026

Software Engineering Intern

Richmond, VA

- Cut AI workflow generation time **65%** to under 15s by replacing a Claude skill's open-ended search with focused sub-skills that call Python tools for workflow search and validation, guided by CloudWatch and OpenSearch latency logs
- Precomputed popular workflows from a 270K+ row PostgreSQL table into a category tree that the Claude skill searches first, with Redis caching full workflows, so lookups rarely touch a database gated by permissions and rate limits

UMD App Development Contracting (Client: Amazon Leo)

Jan 2026 – Present

Software Engineer (Contract)

College Park, MD

- Reduced end-to-end latency **34%** for a pipeline routing 6,000+ scraped research documents to inference by replacing S3 staging hops with Kinesis streams feeding Lambda

UMD Institute for Advanced Computer Studies (UMIACS)

Dec 2025 – Present

Machine Learning Research Intern

College Park, MD

- For a PhD-led robotics project aimed at ICLR, built a pipeline that overlays AnyGrasp's candidate grasps on camera images in Open3D for a vision-language model, then tuned prompts so it favors grasps that avoid hitting the table

UMD Nano-Satellite Development Program

Dec 2025 – Present

Systems Engineer

College Park, MD

- Writing flight software in Rust on the KubOS stack for a student nanosatellite, covering command execution, payload control and fault-tolerant onboard operations
- Cut communication latency **23%** by building GraphQL interfaces to KubOS services that stream real-time health telemetry (CPU, memory, subsystem status)

TerpLabs

Jun 2025 – Present

Co-Founder, Software Engineer

College Park, MD

- Built Redis caching in front of the Prisma ORM queries for Tortuga, the studio's class scheduler with 20,000+ visits in its first 30 days, to reduce database load and latency

Technical Skills

Languages: C++17, C, Python, Java, Rust, SQL, TypeScript, Bash

Systems & Performance: debugging and profiling with Linux perf (hardware counters, top-down analysis), POSIX, STL, B+ trees, LSM trees, data structures and algorithms, benchmarking

Cloud & Tools: AWS (Lambda, Kinesis, EC2, Fargate, CloudWatch monitoring), AWS CDK, PostgreSQL, Redis, Docker, GitHub Actions (CI/CD), Git, Pytest

Certification: AWS Certified Developer – Associate (Nov 2024 – Nov 2027)
