

AMAR DHILLON

NYC Area | amardhillon844@gmail.com | (XXX) XXX-XXXX | linkedin.com/in/amar-dhillon-917537261 | github.com/AmarDhillon05

Education

University of Maryland, College Park

B.S. in Computer Science, Minor in Statistics; GPA: 3.5

May 2028

College Park, MD

Experience

Amazon Web Services

Sep 2026 – Dec 2026

Software Development Engineer Intern

Redmond, WA

- Tuning Java-based upper/lower bounds on EC2 capacity reserved for Amazon Redshift operations like patching, backtesting policies to balance availability against cost

Capital One

Jun 2026 – Aug 2026

Software Engineering Intern

Richmond, VA

- Rebuilt a legacy test-data workflow builder in React/TypeScript + Electron, adding a React-Flow editor and Jest-tested validation; **90%** of 30+ surveyed developers preferred it to the old tool
- Built a precomputed tree-style search index over popular workflows from a **270K+ row** PostgreSQL table (Python/SQLAlchemy, Redis cache) to minimize DB queries under access limits
- Cut LLM workflow generation time **65%** to under 15s by decomposing a Claude skill into sub-skills backed by Python search/validation tools, guided by CloudWatch + OpenSearch latency logs

UMD App Development Contracting (Client: Amazon)

Jan 2026 – Present

Software Engineer (Contract)

College Park, MD

- Shipped a space-research tool used by Amazon Leo's public-policy team, now maintained by Leo engineers; deployed on Docker + AWS Fargate via GitHub Actions with AWS CDK (TypeScript) IaC
- Reduced end-to-end latency **34%** for a pipeline routing 6,000+ scraped research documents to inference by moving it onto Kinesis streams feeding Lambda processors
- Automated fine-tuning of an AWS Bedrock source-relevancy model via EventBridge cron, with decision gates skipping redundant retraining; added X-Ray tracing and SNS failure alerts

UMD Institute for Advanced Computer Studies (UMIACS)

Dec 2025 – Present

Machine Learning Research Intern

College Park, MD

- Developing automated training for PhysTwin, a physics-based digital twin, on a PhD-led team targeting ICLR
- Engineered a Python pipeline rendering AnyGrasp multi-camera grasp candidates as Open3D overlays for a Qwen3-VL-8B vision-language model, letting researchers isolate scene components
- Shortened research-environment setup time **30%** with uv dependency pinning and Docker; added psutil time/memory profiling and Pytest suites to find bottlenecks

TerpLabs

Jun 2025 – Present

Co-Founder, Software Engineer

College Park, MD

- Co-founded a **110+ member** campus product studio that has shipped 5 live products, run with Jira and GitHub
- Wrote Prisma SQL queries and Redis query caching to reduce DB load and latency for Tortuga, a class scheduler that drew **20,000+ visits** in its first 30 days
- Building a RAG meal-suggestion feature for the official UMD app (GPT-4o mini, ChromaDB + SentenceBERT search); **93%** of generated meals rated satisfactory by internal testers

Projects

IEX Matching Engine Simulation | C++, STL, POSIX

Jul 2026 – Aug 2026

- Implemented a C++ order-book simulator replaying historical IEX data, with a contract-based plug-in interface so alternative approaches swap in with enforced correctness
- Designed paginated hash-based order-book storage with an in-memory LFU cache for hot tickers during simulation, checked for drift against IEX historical book data
- Benchmarked a time-based adaptive LSM store against a B+ tree for simulation logs, measuring throughput and latency via rdtscp and hardware utilization via Linux perf counters

Technical Skills

Languages: Python, Java, C++, C, TypeScript/Javascript, SQL

AWS: Lambda, Kinesis, Fargate/ECS, API Gateway, EventBridge, Bedrock, CDK, CloudWatch, X-Ray, SNS

Backend & Data: Node.js, React, Electron, PostgreSQL, Redis, SQLAlchemy, Prisma, OpenSearch, ChromaDB

AI/ML & Tools: PyTorch, RAG, Open3D, Docker, GitHub Actions, Linux, Pytest, Jest, uv, perf

Certification: AWS Certified Developer – Associate (Nov 2024 – Nov 2027)
